### DETAILED ACTION

1. In view of the amendment of March 13, 2007, previous 102(b) rejection on claim 7 over Tomaru et al (JP'845) is hereby withdrawn.

### ***Claim Rejections - 35 USC § 112***

2. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

3. Claim 7 is rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. Applicants recite that a core layer of a photosensitive composition is formed by a spin-coating method *with a thickness which satisfies a single-mode condition of a resulting optical waveguide that comprises the core layer*. Although there is a support for an active step of forming a single-mode channel waveguide, there is no support for "forming a core layer . . . *with a thickness which satisfies a single-mode condition . . .*" (the only thickness value for the core layer as disclosed in the original disclosure is 8 um).
